

WATERGUARD

Water Removing Filters

WaterGuard's Patented Technology Water-Removing Filters remove even the Emulsified Water and Acids that develop in Hydraulic and Industrial oils and can restore dielectric strength back to transformer oil while the transformer remains in the substation or on the pole. They can restore contaminated oils back to like new oil condition and do so while the oil stays in service.

WaterGuard Filters removes the water that develops in oil by bonding to the Hydrogen Atoms and the Oxygen Atom of the H₂O molecule, which molecularly bonds the water to the patented media of the WaterGuard Filter and in doing so can remove even Emulsified water from alcohol blended gasoline and diesel fuels.
