

WaterGuard

Particulate and Water Removing Filtration Systems

10 - 30 GPM

5 -10 GPM

10 GPM

5 GPM

WaterGuard Portable and Stationary Filtration Systems are the heaviest duty and highest quality of such products on the market today. Constructed of carbon or stainless cold rolled 3/8" steel with 1/2" plate for their base, top plates, and lid covers. WaterGuard Filtration Systems will provide years of trouble free service no matter how rugged the treatment is that they receive.

Powered by either air motor or electric motor the pumps on WaterGuard Filtration Equipment are built to last even under the most rugged and hazardous of conditions. Built strong yet easy to maneuver and there is no filtration job too small or too large for WaterGuard Filtration Systems that range from 2 GPM to 30 GPM when used with WaterGuard's new patented water removing filters. This equipment can restore contaminated oil to the clarity of new oil by remove particulate to as small as 1/2 micron and the emulsified water and the acids that can form in transformer oil, hydraulic oil, gear oil, gasoline and diesel fuel. And they will do so, whether the oil or gasoline is held in large storage tanks or in transformers that are still on the pole. WaterGuard's new patented filter technology can remove the water that is held suspended in alcohol-blended gasoline and industrial storage tanks, even if the gasoline contains E-85 levels of alcohol or the water has emulsified into the oil.
