

HYDRO BLOCK

Water Blocking Industrial Gel

“HYDRO-BLOCK” Water Blocking Industrial Gel is a soft grease-like material designed to stop the migration of water through electrical conduits into electrical systems and wire connection boxes. HYDRO-BLOCK comes in 10 and 30 ounce caulking tubes and 5 gallon pails that allow easy injection of HYDRO-BLOCK into electrical conduits, wire connection boxes, switch boxes, and any other enclosed area that is to be protected from invasive water. On contact with water HYDRO-BLOCK has the unique property of releasing negative-valent polymeric groups that are drawn by the water that co-valiant bond with the H₂O molecules and in doing so turns the water to a rubbery material that is incapable of fluid movement. In doing so, the water itself, acts as a barrier to any further water passing through the conduit. HYDRO-BLOCK is a patented composition designed to never harden to allow future installation or removal of wires. It will not freeze at forty degrees below zero and will not melt even if it is on fire. HYDRO-BLOCK also acts as a barrier to the passage of insects such as ants and for further information on HYDRO-BLOCK contact;
